

## New Product Announcement

[www.aastratelecom.com](http://www.aastratelecom.com)

Announcing the addition of three new SIP telephones to Aastra's IP Series, standards based, enterprise grade terminals for the North American market.

Aastra Telecom is pleased to announce the availability of three additional models to our popular IP series of terminals. The 9143i (33i)\*, 9480i (35i)\* and 9480i CT (35i CT)\* share the same look of other IP Series telephones (9133i, 480i, 480i CT) but are equipped with a powerful new internal design offering the identical feature set, advanced security and interoperability available in the Aastra 5i Series of SIP telephones.

These models, with their increased memory and faster processing capacity support the more advanced 2.x software stream offering a variety of advanced security options, interoperability, usability options, protocol support and XML enhancements. In addition, these new telephones work with the AastraLink Pro 160, Aastra's new Small Business IP-PBX solution.

With lower pricepoints than the Aastra 5i Series, these new telephones offer a value priced option for those looking for advanced SIP features in more traditional phone design package.

These new telephones can be ordered now, using the following order information:

Part Number	Description
A1733-0131-10-05	Aastra 9143i (33i)
A1735-0131-10-05	Aastra 9480i (35i)
A1737-0131-10-05	Aastra 9480i CT (35i CT)

For more information, visit our website at [www.aastratelecom.com](http://www.aastratelecom.com), contact your Aastra Sales representative or call the order desk.

\* Due to global numbering nomenclatures, branding on initial product shipments may reflect 3x model names
